Ideal Answer: A control chart is used to monitor process variation over time, distinguish between common cause and special cause variation, and determine whether a process is in statistical control.
Approach: Recall the key purpose? monitoring stability and detecting anomalies.

Statistical Calculations

Example Question: "Given a process with a mean of 50 and a standard deviation of 2, what is the 3-sigma control limit?"
Ideal Answer: Control limits are calculated as:
 Upper Control Limit (UCL) = Mean + 3×Standard Deviation = 50 + 3×2 = 56
 Lower Control Limit (LCL) = Mean - 3×Standard Deviation = 50 - 3×2 = 44
Approach: Use your knowledge of control chart formulas, ensuring you understand the concept of standard deviation and sigma levels.

Scenario-Based Questions

Example Question: "A project team notices an increase in defects after implementing a new process. Which tool should they use first to identify the root cause?"
Ideal Answer: They should start with a Fishbone (Ishikawa) diagram or 5 Whys to systematically explore potential causes.
Approach: Identify the troubleshooting sequence, emphasizing root cause analysis techniques.

Detailed Breakdown of Key Topics with Sample Answers

DMAIC Methodology

Question: "Describe the purpose of the Measure phase in DMAIC."
Answer: The Measure phase involves collecting data to establish a baseline performance of the process, identify key input variables, and quantify the current level of variation. This phase provides the data needed to analyze the root causes of defects and measure improvement potential.
Explanation: A good answer covers data collection, baseline metrics, and establishing process capability.

Statistical Tools

Hypothesis Testing

Question: "In a hypothesis test comparing two process means, what does a p-value less than 0.05 indicate?"
Answer: It indicates that there is statistically significant evidence to reject the null hypothesis, suggesting a real difference exists between the two process means at a 5% significance level.

Process Capability Analysis

Question: "What does a Cp value of 1.2 indicate about a process?"
Answer: A Cp of 1.2 suggests the process is capable of producing within specification limits with some room for variation, indicating a relatively capable process. Values above 1.0 generally denote a capable process, though Cp alone doesn't account for process centering.
