- Interoperability:** Using standardized data formats like ARINC 424 and Aeronautical Data Format (ADF).
- Data Quality:** Applying rigorous data validation and error-checking procedures.
- Dynamic Updating:** Enabling real-time or near-real-time updates to reflect temporary or permanent changes.

Integration with Advanced Navigation Systems The manual recognizes the shift from conventional ground-based navigation aids to satellite-based systems such as GPS, GLONASS, Galileo, and BeiDou. It provides guidance on producing charts optimized for these systems, including:

- Overlaying navigation data**
- Depicting satellite navigation coverage**
- Ensuring compatibility with automatic dependent surveillance (ADS) and other systems**

Moving Toward a Seamless Global Navigation Picture ICAO's vision, articulated through ICAO Doc 9137, aligns with the broader goal of a seamless, integrated global navigation system. This entails harmonized chart standards, digital data sharing, and collaborative maintenance efforts among states and industry stakeholders.
