Sample Final Organic Chemistry Exam Questions and Solutions Below, we discuss representative questions often encountered in final exams, along with detailed solutions, illustrating best practices.

Question 1: Nomenclature and Structural Identification Given the structure of a complex organic molecule, identify the IUPAC name and draw its major resonance forms.

Solution:

Step 1: Analyze the structure to identify functional groups, rings, substituents.

Step 2: Assign priorities based on IUPAC nomenclature rules.

Step 3: Name the longest carbon chain containing the highest priority functional group.

Step 4: Number the chain to give substituents the lowest possible numbers.

Step 5: Draw resonance forms considering delocalized electrons, especially in conjugated systems or aromatic rings.

Key Takeaways: Always verify substituent positions. For resonance structures, ensure electron movement adheres to rules (e.g., octet, formal charges).

Question 2: Reaction Mechanism ? SN1 vs. SN2 Predict the major product and mechanism when 2-bromo-2-methylpropane reacts with sodium hydroxide.

Solution:

Step 1: Recognize the substrate as a tertiary alkyl halide.

Step 2: Recall SN1 mechanism is favored for tertiary halides due to carbocation stability.

Step 3: The mechanism involves: Formation of a tertiary carbocation after leaving group departure. Nucleophile (OH⁻) attacking the carbocation from either face, leading to racemization if chiral centers are present.

Step 4: The major product is tert-butanol.

Features: SN1 involves a two-step process with carbocation intermediate. SN2 is unlikely due to steric hindrance.

Question 3: Spectroscopic Data Interpretation Given IR, NMR spectra for an unknown compound, identify the functional groups and deduce the structure.

Solution:

IR Spectrum: Strong peak around 1700 cm⁻¹ ? carbonyl group (C=O). Broad peak near 3300 cm⁻¹ ? O-H or N-H stretch.

¹H NMR Spectrum: Singlet at ? 2.1 ppm ? methyl group attached to a carbonyl. Multiplet around ? 7.2 ? 7.4 ppm ? aromatic protons.

2D NMR / Additional Data: Correlate signals to confirm connectivity.

Conclusion: The data suggests an aromatic ketone with hydroxyl functionality, possibly phenolic ketone.
