To illustrate how the mark scheme functions, let's analyze some typical questions from the June 2013 paper and their corresponding mark schemes.

Example 1: Data Types and Variables

Question: Identify two data types used in programming and explain their

significance. Mark Scheme Highlights: Correct identification of data types (e.g., integer, string) ? 1 mark each Explanation of significance (e.g., integers store whole numbers, strings store text) ? 1 mark each Expected Student Response: Integer: Stores whole numbers, useful for counting. String: Stores text, essential for handling names, labels. Marking Commentary: Full marks awarded if both data types are correctly identified and explained. Partial marks for only one correct identification or incomplete explanations. Example 2: Flowcharts in Programming Question: Draw a flowchart to check if a number entered by the user is positive. Mark Scheme Highlights: Correct use of start/end symbols ? 1 mark Proper input/output symbols ? 1 mark Correct decision symbol with a true/false branch ? 2 marks Clear labels and logical flow ? 2 marks Expected Student Response: A flowchart beginning with a start symbol, prompting for input, decision point checking if the number > 0, and then outputting ?Positive? or ?Not positive? accordingly. Marking Commentary: Marks are awarded based on the correctness and clarity of each component. Partial marks may be given if, for example, the decision symbol is correct but the branches are not labeled properly.
