The Notebook Interface

Mathematica's primary workspace is an interactive notebook that supports a mix of code, output, and narrative text. This format encourages exploratory programming, iterative testing, and documentation.

Basic Syntax and Expressions

Mathematica expressions are built using a prefix notation, where functions are written before their arguments: `Sum[n^2, {n, 1, 10}]`. This computes the sum of squares from 1 to 10. The language naturally supports mathematical notation such as `Integrate[x^2, x]` which symbolically computes the indefinite integral.

Variables and Assignments

Variables are assigned using `=`, and the language is dynamic, meaning you can redefine variables at any time: `aa = 5; b = 3; c = a + b`.

Core Programming Constructs in Mathematica

Functions and Definitions

Creating reusable code blocks is fundamental. In Mathematica, functions are defined using pattern matching: `square[x_] := x^2`. Here, `x_` is a pattern that matches any input, and `:=` indicates a delayed assignment, meaning the right-hand side is evaluated each time the function is called.
