Modeling Basics in Blender

Modeling is the foundation of most 3D projects. Here's how to create your first model.

Creating a Simple Object

Open Blender and delete the default cube if desired (select and press X). Add a new object: press Shift + A and select Mesh > Cube. Use the Move (G), Rotate (R), and Scale (S) tools to manipulate the object.

Editing the Mesh

Switch to Edit Mode by pressing Tab. In Edit Mode, you can modify the mesh's vertices, edges, and faces. Use Vertex Select (1), Edge Select (2), or Face Select (3) modes. Select parts of the mesh and use tools like Extrude (E) to extend geometry. Apply Loop Cuts (Ctrl + R) to add additional geometry for more detail.

Using Modifiers for Non-Destructive Editing

Modifiers are powerful tools that allow you to alter models without permanently changing the base geometry. Examples include Subdivision Surface for smoothing, Mirror for symmetrical modeling, and Boolean for combining objects. Apply modifiers once you're satisfied, or keep them editable for future adjustments.

Adding Materials and Textures

Realistic or stylized visuals rely heavily on materials and textures.

Creating Basic Materials

Select your object. Go to the Material Properties tab in the Properties Panel. Click New to create a new material. Adjust properties like Base Color, Metallic, and Roughness.

Applying Textures

Switch to the Shading Workspace for node-based material editing. Add an Image Texture node and connect it to the Base Color input. Select your texture image file. Use UV Unwrapping (Tab into Edit Mode, select all with A, then U > Unwrap) for accurate placement.

Lighting and Rendering Techniques

Proper lighting enhances the realism and mood of your scene.

Adding Lights

Press Shift + A and choose Light. Select from point, sun, spot, or area lights depending on your scene needs. Adjust light properties such as intensity, color, and position in the Properties Panel.

Rendering Your Scene
