Configuration and Customization Recipes

Recipe 3: Customizing Work Item Forms Using Process Templates

Objective: To tailor work item forms to match organizational workflows.

Steps:

- Access the process template used in your team project.
- Use the Process Editor or XML to add custom fields.
- Define rules for field validation and layout.
- Save and publish the modified process.
- Apply the process to new or existing projects.

Proven Tips: Use the Process Template Editor for a GUI-based approach. Version control your process templates for auditability.

Recipe 4: Setting Up Notifications and Alerts

Objective: To ensure team members receive timely updates on work item changes, builds, or releases.

Steps:

- Navigate to the Project Settings > Notifications.
- Create custom subscription rules based on event types.
- Specify recipients via email, webhook, or other channels.
- Test notifications to confirm delivery.

Proven Tips: Use subscription filters to avoid notification overload. Automate notifications for critical events to improve responsiveness.

Build and Release Pipeline Automation Recipes

Recipe 5: Creating a Continuous Integration (CI) Build Pipeline

Objective: To automate code compilation, testing, and packaging.

Steps:

- Define the build agent pool.
- Create a new build pipeline using the visual designer.
- Configure source repository integration (Git or TFVC).
- Add build tasks: Restore dependencies, Compile source code, Run unit tests, Publish build artifacts.
- Save and run the build.

Proven Tips: Use YAML-based pipelines for version-controlled configurations. Incorporate code quality tools like SonarQube.

Recipe 6: Automating Deployment with Release Pipelines

Objective: To streamline deployment to various environments (Dev, Test, Production).

Steps:

- Define deployment

environments. Link build artifacts to release pipelines. Configure deployment tasks (e.g., Azure App Service deploy, IIS). Set approval gates for production deployments. Automate trigger conditions. Proven Tips: Use environment-specific variables for flexibility. Incorporate rollback procedures in case of failures.

Work Item Management and Reporting Recipes

Recipe 7: Implementing Custom Work Item Queries and Dashboards

Objective: To visualize project metrics and track progress effectively.

Steps: Use the Query Editor to create custom work item queries. Save queries as shared or personal. Build dashboards and add widgets for query results, charts, and metrics. Share dashboards with stakeholders.

Proven Tips: Use Wiql queries for advanced filtering. Automate dashboard updates with data-driven widgets.

Recipe 8: Exporting Reports for External Analysis

Objective: To generate reports compatible with external BI tools.

Steps: Use the Analytics service or Power BI integration. Connect Power BI to Azure DevOps data sources. Create visualizations based on work item data. Schedule regular report refreshes.

Proven Tips: Leverage pre-built Power BI templates. Maintain data security and access controls.

Security and Permissions Recipes

Recipe 9: Configuring Security Groups and Permissions

Objective: To establish granular access control for projects and artifacts.

Steps: Create security groups in Active Directory or within Azure DevOps. Assign permissions at project, area, or iteration levels. Set permissions for specific work item types, queries, or dashboards. Test permissions with different user roles.

Proven Tips: Follow the principle of least privilege. Regularly review permissions for compliance.

Recipe 10: Enabling Multi-Factor Authentication (MFA)

Objective: To enhance security for user access.

Steps: Integrate Azure Active Directory with Azure DevOps Server. Enable MFA policies in Azure AD. Enforce MFA for all users or specific groups. Communicate changes and provide user guidance.

Proven Tips: Use Conditional Access policies for targeted MFA. Monitor sign-in logs for suspicious activity.

Extensions and Integration Recipes

Recipe 11: Installing and Managing Extensions

Objective: To extend functionality with third-party or custom extensions.

Steps: Browse the Visual Studio Marketplace. Install desired extensions via the browser or directly in Azure DevOps. Configure extension settings as needed. Manage updates and deactivation.

Proven Tips: Use extensions to integrate with tools like Jenkins, Jira, or Slack. Validate extension compatibility with Azure DevOps Server 2019.

Recipe 12: Integrating with External Systems

Objective: To enable seamless workflows across tools.

Steps: Use REST APIs for custom integrations. Set up service hooks for real-time event notifications. Automate data exchange with external systems. Document integration points for maintenance.

Proven Tips: Use OAuth tokens for secure API access. Test integrations in sandbox environments before production.

Monitoring and Troubleshooting Recipes

Recipe 13: Monitoring Server Performance

Objective: To ensure optimal operation and preempt issues.

Steps: Use Performance Monitor or Azure Monitor. Track key metrics (CPU, memory, disk I/O). Set alerts for threshold breaches. Analyze logs for anomalies.

Proven Tips: Schedule regular health checks. Optimize database performance with indexing and maintenance plans.
