Deep Dive into Sample Multiple Choice Questions and Answers

Analyzing specific questions illuminates common patterns and the reasoning behind correct answers. Here, we explore representative MCQs across themes, detailing why each correct option is appropriate.

Cost Behavior and Classifications

Question: Which of the following costs remains unchanged in total regardless of the level of activity?

A) Variable costs
B) Fixed costs
C) Mixed costs
D) Direct costs

Answer: B) Fixed costs

Analysis: Fixed costs, such as rent or salaries, do not fluctuate with production volume within a relevant range. In contrast, variable costs change proportionally with activity (e.g., materials), and mixed costs contain elements of both. Recognizing the nature of fixed costs is fundamental to managerial decision-making.

Cost-Volume-Profit Analysis

Question: If the contribution margin ratio increases, what is the likely impact on the break-even point?

A) It increases
B) It decreases
C) It remains unchanged
D) It depends on fixed costs

Answer: B) It decreases

Analysis: The break-even point in units is calculated as $\text{Fixed Costs} \div \text{Contribution Margin per unit}$. Alternatively, in sales dollars, it is $\text{Fixed Costs} \div \text{Contribution Margin Ratio}$. An increase in the contribution margin ratio means each dollar of sales

contributes more to covering fixed costs, thus lowering the break-even sales level.

Budgeting and Variance Analysis

Question: A favorable variance indicates that actual costs were:

A) Higher than budgeted
B) Lower than budgeted
C) Equal to budgeted
D) Not significant

Answer: B) Lower than budgeted

Analysis: A favorable variance signifies better-than-expected performance. In cost control, this typically means actual costs are less than the budgeted amount, indicating efficiency or cost-saving measures.

Cost Allocation and Activity-Based Costing

Question: In activity-based costing, costs are assigned to products based on:

A) Direct labor hours
B) Manufacturing overhead rates
C) Cost drivers that cause costs to be incurred
D) Sales volume

Answer: C) Cost drivers that cause costs to be incurred

Analysis: ABC assigns overhead costs based on activities that drive costs, such as machine setups or inspection hours, providing more accurate product costing than traditional methods. Recognizing the role of cost drivers enhances cost management and pricing strategies.

Decision-Making Techniques

Question: When considering a special order at a price below the normal selling price, which costs should be relevant?

A) Fixed costs
B) Sunk costs
C) Variable costs directly associated with the order
D) All costs incurred so far

Answer: C) Variable costs directly associated with the order

Analysis: Relevant costs for special order decisions include only those costs that change as a result of accepting the order, typically variable costs incurred specifically for that order. Fixed costs are usually sunk or unaffected in the short term.

Performance Evaluation

Question: Which of the following is a balanced scorecard metric?

A) Return on investment
B) Customer satisfaction levels
C) Gross profit margin
D) Cost of goods sold

Answer: B) Customer satisfaction levels

Analysis: The balanced scorecard includes financial and non-financial measures, such as customer satisfaction, internal processes, learning and growth, alongside traditional financial metrics. This approach provides a comprehensive view of organizational performance.
