Solution: Using the Pythagorean theorem: $\text{hypotenuse} = \sqrt{6^2 + 8^2} = \sqrt{36 + 64} = \sqrt{100} = 10$ cm

Example 2: Geometric Construction Construct a triangle with sides of lengths 7 cm, 24 cm, and 25 cm. Verify if it is a right triangle.
Solution: Check the Pythagorean relation: $7^2 + 24^2 = 49 + 576 = 625$ $25^2 = 625$ Since both are equal, the triangle is right-angled with the hypotenuse of 25 cm.

Example 3: Word Problem A ladder is leaning against a wall, reaching a height of 12 meters from the ground. The base of the ladder is 5 meters away from the wall. Find the length of the ladder.
Solution: Apply the Pythagorean

theorem: $\text{length} = \sqrt{(12^2 + 5^2)} = \sqrt{(144 + 25)} = \sqrt{169} = 13$ meters

Moderate Questions: Require combining multiple concepts or applying logical deductions.

Challenging Questions: Involve complex reasoning, multi-step solutions, or unorthodox approaches, encouraging higher-order thinking.

Analyzing Sample Questions from 2013 Level 5

Sample Question 1: Pattern Recognition In a sequence, the first term is 2, and each subsequent term is obtained by adding 3 to the previous term. What is the 10th term?

Analysis: This question assesses understanding of arithmetic sequences, a fundamental concept in early algebra. It requires recognizing the pattern and applying the formula for the n th term: $(a_n = a_1 + (n-1)d)$.

Solution: The sequence is 2, 5, 8, 11, ... Applying the formula: $(a_{10} = 2 + (10-1) \times 3 = 2 + 27 = 29)$. The question is straightforward but reinforces the understanding of sequences.

Sample Question 2: Geometry and Spatial Reasoning A square has a side length of 4 cm. What is the area of the square?

Analysis: A basic geometry question that tests knowledge of area calculation: $(\text{Area} = \text{side}^2)$.

Solution: $(4 \text{ cm} \times 4 \text{ cm} = 16 \text{ cm}^2)$. While simple, such questions serve as foundational skills.

Sample Question 3: Word Problem A basket contains red, blue, and green apples. There are twice as many red apples as green apples, and the total number of apples is 18. If there are 4 blue apples, how many red apples are there?

Analysis: This problem involves setting up algebraic equations. Let (g) = number of green apples, then red apples = $(2g)$.

Total apples: $(2g + g + 4 = 18)$.

Simplify: $(3g + 4 = 18 \rightarrow 3g = 14 \rightarrow g = \frac{14}{3})$, which is not an integer, indicating a potential trick or an approximation in the problem. In actual contest settings, questions are designed so that solutions are integral,

Primary Level (Grades 1-3): Focused on basic arithmetic, patterns, and simple logical puzzles.

Junior Level (Grades 4-6): Introduced slightly more complex problems involving geometry, number patterns, and basic algebra.

Senior Level (Grades 7-12): Featured challenging problems involving combinatorics, advanced geometry, algebra, and number theory.

In 2008 Bing, the questions aimed to balance accessibility for younger students with challenging problems for older competitors.

Sample Questions and Problem Types in the 2008 Bing Edition

Analyzing actual questions helps identify common themes and problem-solving strategies. Here are some

representative types of questions from the 2008 Bing contest: Arithmetic and Number Patterns
 Example: What is the next number in the sequence: 2, 4, 8, 16, ...? a) 18 b) 20 c) 24 d) 32 e) 36
 Analysis: Recognize the pattern as powers of 2: 2, 4, 8, 16, so the next is 32.
 Geometry and Spatial Reasoning
 Example: A square has a side length of 6 cm. What is the area of the square? a) 12 cm² b) 24 cm² c) 36 cm² d) 48 cm² e) 72 cm²
 Analysis: Area = side² = 6 x 6 = 36 cm².
 Logical Reasoning and Puzzles
 Example: There are three boxes. One contains only apples, one only oranges, and one both apples and oranges. The boxes are labeled incorrectly. You can pick one fruit from one box to identify each box correctly. How many picks are needed?
 Solution: With one pick, you can determine the correct labels by choosing from the box labeled "mixed" and observing the fruit.
 Algebra and Equations
 Example: If $3x + 5 = 20$, what is the value of x ? a) 3 b) 4 c) 5 d) 6 e) 7
 Answer: $x = (20 - 5)/3 = 15/3 = 5$.
